Sweet alert js and css download

让我们来比较看一下错误消息的显示。第一个使用了内置的alert，第二个使用了sweetAlert2。 alert('哎呦.....出错了!'); sweetAlert('哎呦.....', '出错了!', 'error') 是不是非常的酷? 无论你在电脑、手机还是平板上，SweetAlert2都会在页面上自动居中显示，看起来非常棒。SweetAlert2还可高度定制，正如下面你所看到的! swal('任何一个傻瓜都会用电脑') swal('互联网?','还在吗?','question') swal('干得漂亮!', '你点击了按钮!', 'success') swal({ title: '自动关闭弹窗!', text: '2秒后自动关闭.', timer: 2000 }).then(function () {}, function (dismiss) { if (dismiss === 'timer') { console.log('I was closed by the timer') } }) swal({ title: 'HTML 示例', type: 'info', html: '你可以使用组体文本,' + '链接' + '和其它的HTML标签', showCloseButton: true, showCancelButton: true, confirmButtonText: '太棒了!', cancelButtonText: '' }) 带自定义动画的jQuery HTML (Animate.css) swal({ title: 'jQuery HTML 示例', html: \$('') .addClass('some-class').text('jQuery无处不在。'), animation: false, customClass: 'animated tada' }) 警告信息弹窗，"确认"按钮带有一个函数..... swal({ title: '确定删除吗?', text: '你将无法恢复它!', type: 'warning', showCancelButton: true, confirmButtonColor: '#3085d6', cancelButtonColor: '#d33', confirmButtonText: '确定删除!', }).then(function(){ swal('删除!', '你的文件已经被删除.', 'success'); })..... 给函数传入参数，"取消"按钮也可以执行。 swal({ title: '确定删除吗?', text: '你将无法恢复它!', type: 'warning', showCancelButton: true, confirmButtonColor: '#3085d6', cancelButtonColor: '#d33', confirmButtonText: '确定删除!', cancelButtonText: '取消删除!', confirmButtonClass: 'btn btn-success', cancelButtonClass: 'btn btn-danger', buttonsStyling: false }).then(function() { swal('已删除!', '你的文件已经被删除.', 'success'); }, function(dismiss) { if (dismiss === 'cancel') { swal('已取消!', '你的虚拟文件是安全的.', 'error'); } }) swal({ title: 'Sweet!', text: '自定义图片弹窗', imageUrl: ' ', imageWidth: 200, imageHeight: 200, animation: false }) 自定义width、padding和background的信息弹窗 swal({ title: '自定义width、padding和background.', width: 600, padding: 100, background: '#fff url(images/tdUzX2P.png)' }) swal({ title: '提交email来运行ajax请求', input: 'email', showCancelButton: true, confirmButtonText: 'Submit', showLoaderOnConfirm: true, preConfirm: function(email) { return new Promise(function(resolve, reject) { setTimeout(function() { if (email === 'taken@example.com') { reject('该email已存在。'); } else { resolve(); } }, 2000); }); }, allowOutsideClick: false }).then(function(email) { swal({ type: 'success', title: 'Ajax请求完成!', html: '提交的email是:' + email }); }) swal.setDefaults({ confirmButtonText: '下一个-', showCancelButton: true, animation: false }); var steps = [{ title: '问题 1', text: 'swal2链式弹窗是简单的' }, '问题 2', '问题 3']; swal.queue(steps).then(function() { swal({ title: '完成!' , confirmButtonText: '漂亮!', showCancelButton: false }); }).finally(function() { swal.resetDefaults(); }) swal.queue([({ title: '你的公网IP', confirmButtonText: '显示我的公网IP', text: '你将收到公网IP, ' + '通过AJAX请求', showLoaderOnConfirm: true, preConfirm: function () { return new Promise(function (resolve) { \$.get('?format=json').done(function (data) { swal.insertQueueStep(data.ip) resolve() }) } }) })]) 1. 引用必要的文件初始化插件: Or import swal from 'sweetalert2' const swal = require('sweetalert2') 2. Call the sweetAlert2-function after the page has loaded swal({ title: 'Error!', text: 'Do you want to continue', type: 'error', confirmButtonText: 'Cool' }) Has SweetAlert2 helped you create an amazing application? You can show your support by making a donation in one of two ways:Feel free to fork SweetAlert2 on GitHub if you have any features that you want to add!
