In this article, you will learn how to change JioFi password. Keep reading for in-depth step-by-step guide to change the JioFi, JioFi 2 and JioFi 3 passwords.Since the release of Android smartphones, most of people use the smartphones for Hotspot internet connectivity on other devices like PC, Laptop, other smartphones, etc. However, this is not the convenient way to use the internet if you are a professional and needed to stay online all the time. That is the reason more and more people are now buying Reliances JioFi hotspot device to use for Internet connectivity. The JioFi comes with free 4G SIM and sports a 2300mAh battery. When switched on, the JioFi creates Wi-Fi signal of its own and provides speeds up to 30Mbps, as reported by many users.The primary use of the JioFi hotspot device is to wirelessly connect multiple devices. But to set this all up, you will need to search for SSID or the network ID using Wi-Fi on either a smartphone or a PC. You will then be required to enter letters and numbers as apassword. Sounds simple, right it? But things can get really complicated and annoying when you start addingmultiple devices, especially when you have to enter passwords for every new device that you connect. And the default WiFi password for JioFi is not really easy to remember.Every JioFi device comes with password printed on the device below (where the battery goes in), and also on the box of JioFi. This is required to log in to the network from any device and start browsing. The username and password for every JioFi device are unique. Of course, you would want to use a personal WiFi security password (SSID) just to be more secure. Also, personal passwords are easy to remember. If you have no clue how to change JioFi password, this post will guide you to do exactly that. Read on! How to Change JioFi PasswordThere are two passwords in the Reliance JioFi, JioFi 2, and JioFi 3 which you can change. The first one is login password to access your JioFi dashboard. The username and password comes Administrator by default. however, you can change it as per your choice.The second password which you can change is JioFi WiFi password (SSID) which you will require to enter when connect to your Smartphone or PC for accessing the Internet. Follow the steps below to learn how to change JioFi 2 passwords.To change the JioFi or JioFi 2 or JioFi 3 login password, you need to visit 192.168.1.1 in your browser. Simply copy and paste this address in your browser and press enter.This will take you to Jios Admin page where you will need to Login.The Login option is located on the top right-hand corner. Click on Login.A popup window is displayed, where you will need to enter username and password. Type administrator for both username and password.5. Once you logged in, click on Settings menu on the top and then click on User Management on the left sidebar.6. On the User Management page, the first option is to change password for Admin login. You can enter the password of your choice and then click on Apply.Thats all. Your Admin password for JioFi now changed successfully. Now read on to learn how to change JioFi WiFi password.How to Change JioFi WiFi Password (SSID)To change Wi-Fi SSID and Password on Reliance JioFi or JioFi 2/3, first you need to login in the Admin as shown above. Now go to settings and tap on WiFi on the left sidebar.In the WiFi section, there is an option Security Key which is your WiFi password (SSID). If you are not able to change your password and getting any error, comment below. We will help you out. Access the URL or via a web browser. This will proceed you to the page where you can handle the JioFis settings. Now login with the IDs, username as administrator and password as administrator, and hit the login button. JioFi Password Steps for JioFi Password if you already have one. You might want to periodically change the password if you share your connection with others. The JioFi 4G Hotspot is well known among Jio subscribers. You may access 4G internet speeds using this gadget and a Jio SIM on almost any device, including a mobile phone, tablet, laptop, or smart TV. Well also teach you how to change the networks name. If youre using a different device than the JioFi 3, these procedures may be slightly different. Here is where you can acquire a Jio connection if you havent already joined, and you can even buy a JioFi device right now. Observe these instructions to modify your JioFi Wi-Fi networks password: You should turn on your JioFi Wi-Fi equipment as soon as possible. From your device, join the JioFi Wi-Fi network. Open a web browser and enter or in the address bar. There will be a login page. Log in using the username and password. Both administrator and administrator are the default credentials for JioFi routers. Go to Network > Wi-Fi Configuration > Secure key after logging in. Set the new JioFi router password now, then click Apply. All previously connected devices will be disconnected from your JioFi Wi-Fi network and your JioFi password will be changed. The new password must be used to reconnect to the Wi-Fi network. The MyJio App, which is accessible on the Google Play Store and the Apple App Store, also allows users to change their password. To guarantee this: The user must first launch the MyJio app on their smartphone and connect their JioFi router. At the bottom of the screen, select the My Device area by tapping it. The user must then select the Change Password option listed underneath the SSID by clicking the settings icon in the top-right corner of the screen. Next, the user must enter a new password and choose Submit. However, there are occasions when sharing your JioFi dongle password too widely prevents you from having enough bandwidth to complete your task on your smartphone. Now is the ideal time to modify the JioFi dongles password. But do you alter the Jio dongles password? This post will demonstrate not one, but two distinct methods for changing your JioFi devices password with ease and without breaking a sweat. Lets examine it more closely. One of the most well-known portable internet gadgets on the market is arguably the JioFi Wi-Fi dongle. The dongles use a Jio SIM to provide a 4G hotspot and have a variety of intriguing capabilities. Additionally, this makes it possible for customers to link up many devices to the hotspot for quick access to internet connectivity. To alter the default password, sign in and select Settings > WiFi > Password. The admin password used to access the JioFi device settings can be changed by logging in once more and opening Settings -> User Management. Finally, you can modify your JioFi password. You can also discover how to update your JioFi login and password. Must Read Apple Wireless Charger Evolution: Convenience and Innovation The JioFis WiFi network name and password can be found on the back of the packaging box or underneath the battery on the back of the device, if you havent already written them down. Join your gadgets to the JioFi. Check out the Jio website. Visit the Jio websites Forgot Password section. Click Continue after entering your Jio ID, registered cellphone number, or registered email address. An OTP will be sent to the email address or registered mobile number you provided. Hold down the WPS button on your Jiofi, which is located on the side of the device. On your routers main LED screen, the WPS icon should now be visible. Press and hold the button for 6 to 10 seconds before letting go. Your smartphone will now automatically establish a connection with the Jiofi router. You can rely on Jio if you are using a Jio Fiber broadband connection or a Jio Wi-Fi router, but it is crucial to find out how toaccess your Jio router admin dashboard to manage your internet settings. Be it changing Wi-Fipasswords to checking connected devices and enabling parental controls; you can do everything from the router login panel. This article provides you with a complete guide to executing Jio router login, along with default username and password, setup process,and troubleshooting typical problems. Jio Fiber To log in to your Jio router, follow these steps: Via Wi-Fi:On the devicethat you wish to share the internet to (laptop, smartphone and tablet), login to Jio routers Wi-Fi network. Via Ethernet Cable:For a wired connection, you can hook up the Elgato directly to your router and computerusing an Ethernet cable. Open any web browser (Google Chrome, Firefox, Edge, Safari) and type in the default IP address of the Jiorouter in the search bar: Default Jio Router IP:192.168.29.1(JioFiber), 192.168.31.1 (Jio AirFiber) You will be redirected to the Jiorouter login page. Type the username and passwordto log in. Once you log in successfully, youare brought to the Jio router admin panel instead, where you can change settings. Most Jio routers come with default login credentials: Username: admin Password: Jiocentrum Note: The routers label or its user manual may have the password youre looking for if the default credentials above dont work. Change your password after the first login for security. To strengthen the level ofprotection, change the Jio router password. Open the routers administration panel, 192.168.29.1 or 192.168.31.1. Select Administration > User Management.Type in your current password and your new password. Save changes andlog back in using the new password. Tips: Ensure that you use a strong password (combinations of upper andlower case letters, numbers, and symbols) to avoid unauthorized access to the data. If you are unable to accessthe Jio router login page, try these fixes: Make sure the right IP is being used (192.168.29.1 or 31.1), whatever it is! Locate the right IP through the Command prompt (Windows): ipconfig, Terminal (Mac): netstat -nr | grep default Search for the IP address of Default Gateway.Reboot the router and the device. Make sure thatyour Internet connection (Ethernet/Wi-Fi) is stable.Restore the router to its default settings by using the reset button at the back of the Jio router. You will have to use a pin to click it. (Full steps in the below section) Once youre in, youll be able tocustomize different parameters: Change Wi-Fi Name (SSID):Navigate to Wireless Settings >Basic Settings. Change the SSID, and save your change. Change Wi-Fi Password:Go to Wireless Security > WPA2-PSK. Enter a new password and save changes.Limit what your kids can access online oron other devices.Perfect for gaming andserver hosting.Go the Maintenance > Firmware Upgrade and do a check for updates. If you forget yourpassword or if you are experiencing issues, youll need to do a factory reset: Find the Reset button (usually at the back ofthe router). Afterward, press and hold it witha pin for 10-15 seconds. Therouter will restart (LED lights will flash). Re-login with default credentials. Note: If you do a reset, all of your settings will be erased. To remain secure and prevent others from taking advantage of your Wi-Fi, heres whatyou need to do: After you log in, change the default adminpassword. Encrypt with WPA2/WPA3(not an open network). Disable WPS if you dontactually use it is a popular attack vector. Periodically review your routerslist of connected devices. When sharing, tap onthe guest Wi-Fi option. Also, keep your firmware up to date toresolve bugs and enhance performance. Once you know the right steps, you can easily access the Jio router loginpage (192.168.1.1). This manual included how to log in, how to change your password, some troubleshooting procedures, andsome advanced configurations. As always, make sure to update your routers firmware and use a strong password to protectyour network. Contact the Jio Customer Care (198)helpline for further details or mail on the MyJio app. So, thats all we have for you about Jio Router Login IP Address & Admin Settings. We hope that this guide has helped you. For more info, comment below. About the AuthorHe is an Engineer who has always searched for something new. He found peace in technology and gaming. JioFi Name (SSID) and Password Change Here, we will present the step-by-step process of how to change the JioFi password and name (SSID). The process will also work if you forgot your JioFi password but dont know how to recover or change the password. Also, Read: Quick Steps to Change JioFi Password: The steps mentioned below are applicable to both PC/Laptop and Smartphone, please follow all the steps correctly to change your JioFi Router password, everyone. If you want the in-depth step-by-step guide with proper screenshots, you can continue reading the full article; below we have clearly presented all the steps with visual representations. Connect your device to the JioFi Router. Open any browser and type > . If you are using a Jio dongle, then open jiodongle.local.html in the search bar and click search. At the top right corner, click on the login button. Enter administrator as the username and password. After login, navigate to the WiFi settings which you will find under the Settings tab. Here, you will get a list with several options including Password and SSID Name. Choose those options. You can now change the password and SSID name according to your choice. Once you have done this, click on the Save button. You have now successfully changed your password and SSID WiFi name. Now, disconnect all the devices which are connected to your JioFi router. You have to again enter the new password to reconnect your devices. However, the above process is only for the JioFi router, the Jio SIM for mobile has different settings. Also Read: How to block Jio SIM online How to Reset the JioFi Password? Here is the step-by-step process on how to reset your JioFi Password: To conduct a hard reset for your default settings and configurations, you have to follow one of the below-mentioned steps on your JioFi Router device. Step 1: Now, in this step, you have to open the backside case of your actual device, there you will find your device battery, SIM card, and other things like memory card slot, etc. Look around carefully over there; there you can find a reset button, which is partially invisible and looks like a small hole. Just use a small pointed tool, to reach the button and press it for at least 10-20 seconds. Now all your JioFi device configurations are factory reset like a new device. Step 2: In this step, you dont need to open the back cover of your router. All you can do is press the two buttons(WPS + POWER Button) simultaneously, for at least 20 seconds, and after that, just reboot your device. Now youre done. All the default settings will be automatically overwritten with your current settings including your old password and SSID name. Now, if wish to change the password of your choice, then follow the below steps of the article to change your password, by which you can enhance your device security & prevent unauthorized access to your Hotspot connection. Also Read: How to Order Jio SIM Online We recommend you follow all the steps correctly, to conduct a successful password-changing procedure. This section explains to you all the steps needed to reset your JioFi Router Password while using a mobile device(smartphone). Although, the same steps are always applicable if youre using a desktop, laptop, or any other similar device. Also Read: Jio SIM not working: How to Fix? Switch on Your JioFi router device: Take your JioFi Device and press the power button for a few seconds, or till the device is on. However, you have to be patient until the router is completely ready for use. Connect any device to the Router: Now, it is time to connect either your smartphone or laptop to the JioFi router network. If you have not changed the username and password earlier, then you will get a default username and password over the backside of the JioFi packaging box or maybe on the back of the JioFi router. But, if you have changed your JioFi password previously, then you will have to enter your customized password to log in to get internet access. Access the configuration page to manage settings: Now, it is time to access the configuration page; for which you have to open a web browser and enter or in the search bar and click on the search option. Time to log in to the Settings Page: After hitting on the URL provided in the above step, you will be landed at the login page. Here, operators SIM cards like Airtel, Vodafone Idea, or any other SIM cards on a Jio device. Because its a locked device with high-level security features that work well only with a Jio SIM.We never recommend you bypass any such security features by implementing some unethical activities. Its not safe for you, and you will end up your device warranty. Actually, the JioFi router was made to easily access high-speed 4G network connectivity for a non-4G smartphone. So you can easily connect your 3G device, without any hassle. Yes, you can easily connect any Wi-Fi-enabled device to a JioFi Router without any issues.May it be a Smartphone, Laptop, PC(with Wi-Fi card), Amazon Alexa, Google Home Mini, Wireless Security Cameras, or any such devices you have. When you start to use a JioFi device, the SSID & the password are clearly mentioned there on the box packaging. If you dont have the box with you, you can open the backside case of your device, and remove the battery there you will find your device password.If you have ever changed your default password and dont remember that you can easily reset your JioFi device password, as we clearly mentioned all the steps above in the article. The WPS stands for Wi-Fi Protected Setup. Where you can share your Internet connection easily with any nearby device, without sharing your Hotspot password for temporary access in need. The WPS is a wireless network security standard in terms of technology.To use it, press and hold the WPS button of the JioFi router, connect any mobile with a WPS feature from the settings > Network > Wi-Fi > Wi-Fi Preferences > WPS push Button, and click there, wait for a few moments to discover your device and connect your router wireless. To connect a JioFi device with a laptop your laptop must have a Wi-Fi card inbuilt(for older models), now you have to connect your laptop by activating the wifi from the control panel to the hotspot, the step is as simple as connecting a mobile device. The reason may be due to a battery fault, or the device is completely discharged(out of battery). To confirm the issue, connect the router device to a charging port for a few minutes, and check again. If there is no change, just replace the battery. Sometimes this problem can be caused due to a faulty charger. To perform a hard reset for your JioFi 4 router, simply follow the above steps mentioned, or you can easily find the power JioFi secure. It is always necessary to lock your JioFi hotspot device with a strong and secure password to prevent any unwanted connections with your device. Whether you are sharing it with others or not, you should always keep the password of your JioFi and if you are sharing your Internet connection with others, then you must require changing it every now and then. The longer the password is in use, there will be more likely the chances of compromising. You can get to know your password strength online using a password strength checker tool. It is a good idea to share your hotspot only with people you want as you definitely dont want any suspicious third parties or hackers to hook up to your network and create any problems. You can also customize the name of the network as it is the best option to manage your password and Wi-Fi name to keep it secure. However, the steps may vary slightly depending on the device you are connected to. Also Read: How to Fix Airtel SIM Not Working Problem In this article, we have discussed several working steps to easily change the JioFi password and the various ways to reset it. I hope this article was helpful to you, if you still getting trouble with your JioFi password change, then please leave a comment below to solve your queries. This section of the article will guide you through the various questions you have in your mind regarding the JioFi Router settings. You can connect a maximum of 10-30 devices to a single JioFi router at once. It depends upon your router version, your network strength & the speed of the Internet service you are getting at your location.But keep in mind that, the more device you connect with a single router the less Internet speed you will get per device because the connection will be equally shared with each device connected to the hotspot. Earlier, there were 4 models of the JioFi 4G Hotspot Router released already, but if you want to buy a new one; then go for the JioFi 5.It is the most recent version available now. You can easily find it both in any online or offline marketplace. No, you cant use other network operators SIM cards like Airtel, Vodafone Idea, or any other SIM cards on a Jio device. Because its a locked device with high-level security features that work well only with a Jio SIM.We never recommend you bypass any such security features by implementing some unethical activities. Its not safe for you, and you will end up your device warranty.Actually, the JioFi router was made to easily access high-speed 4G network connectivity for a non-4G smartphone.
